

Annalisa

Variety background

Breeder	GROCEP
Breeder Agent	Branston
Parentage	Allians x Lutine

Agronomy characteristics

Maturity	Early
Dormancy	Medium
Yield	High
Shape uniformity	Very good
Tuber shape	Round oval
Tuber numbers	High – Very high
Eye depth	Shallow
Flower colour	White
Bruise/damage resistance	Medium
Drought resistance	Medium
Nitrogen group RB209	2

Resistances (1=low/poor)

Foliage blight	7
Tuber blight	7
Common scab	7
Powdery scab	-
Dry rot	-
Blackleg	-
PVY	6
PLRV	-
Spraing (TRV)	-
PCN Ro1	Susceptible
PCN Pa2/3	Susceptible

Sensory characteristics

Cooking type	AB – Firm
Skin colour	Yellow
Flesh colour	Light yellow
Disintegration	Low
Dry matter %	19.2%
Target market	Table use - Salad

Seed density

Count/50kg	Population (000/ha)	Seed Rate (t/ha)
500	58.0	5.80
600	63.0	5.25
700	69.0	4.93
800	74.0	4.63
900	77.0	4.28
1000	80.0	4.00

A first early, firm-textured new / salad potato capable of producing high yields of small tubers. Early maturing and with fast skin-set.

Annalisa

The variety has useful blight resistance while the good drought and common scab resistance makes it suitable for most soil types.
